EURYCEA WATERLOOENSIS	AUSTIN BLIND SALAMANDER	G1	S1	C		Y	Y

This information is provided by NatureServe (www.natureserve.org) and its Natural Heritage member programs, a leading source of information about rare and endangered species, and threatened ecosystems.

¹ This list contains only the elements maintained in the Natural Heritage database housed at the TxCDC. It is not intended, nor should it be interpreted, as a full species list for the state.

² See Appendix I for an explanation of the rank and listing status codes.

³ Endemic to Texas.

⁴ "Y" indicates taxa that are actively tracked, i.e. occurrence information is obtained and processed, by the TxCDC. Watch List species, identified by "W," are those taxa that are not actively tracked, but may be of conservation concern in the future.

APPENDIX I

Global Rank (GRANK)

Rank	Meaning
G1	Critically imperiled globally, extremely rare, 5 or fewer occurrences. (Critically endangered throughout range.)
G2	Imperiled globally, very rare, 6 to 20 occurrences . (Endangered throughout range.)
G3	Very rare and local throughout range or found locally in restricted range, 21 to 100 occurrences. (Threatened throughout range.)
G4	Apparently secure globally.
G5	Demonstrably secure globally.
G?	Not ranked to date.
G#?	Rank uncertain.
G#G#	Ranked within a range as status uncertain.
G#NA	Accidental in North America.
G#NE	An exotic species established in North America.
G#T#	"G" = species rank; "T" = rank of variety or subspecies.
GH	Of historical occurrence throughout its range; may be rediscovered.
GU	Possibly in peril rangewide, but status uncertain; need more information.
GX	Believed to be extinct throughout range; little or no expectation of rediscovery.
Q	Qualifier denoting questionable taxonomic status.
C	Captive population exists.

State Rank (SRANK)

Rank	Meaning
S1	Critically imperiled in state, extremely rare, very vulnerable to extirpation, 5 or fewer occurrences.
S2	Imperiled in state, very rare, vulnerable to extirpation, 6 to 20 occurrences.
S3	Rare or uncommon in state, 21 to 100 occurrences.
S4	Apparently secure in state.
S5	Demonstrably secure in state.
SA	Accidental in state.
SE	An exotic species established in state.
SH	Of historical occurrence in state; may be rediscovered.
SN	Regularly occurring, non-breeding status.
SP	Potential occurrence in state.
SR	Reported, but without conclusive evidence to accept or reject report.
SRF	Reported in error, but error persists in literature.
SU	Possibly in peril in state, but status uncertain.
SX	Apparently extirpated from state.
SZ	Migratory/transient in state to irregular/dispersed locations.
S#?	Rank uncertain.
S?	Not ranked to date or denoting uncertain rank.
C	Captive population exists.

U.S. Endangered Species Act (USES) Status

ABBREVIATION	USES STATUS
LE	Listed endangered
LT	Listed threatened
PE	Proposed endangered
PT	Proposed threatened
C	Candidate
PDL	Proposed for delisting
E(S/A) or T(S/A)	Listed because of similarity of appearance
XE	Essential experimental population
XN	Nonessential experimental population

State Protection Status

STATUS	EXPLANATION
E	State Endangered
T	State Threatened

NatureServe Designations for Explicit and Implied Listing Statuses

DESIGNATION	EXPLANATION
Value	The taxon is named in the Federal Register and has one status.
Value-value	The taxon has one status, but a more recent proposal has been made to change that status with no final action yet published. For example, "LE-PDL" indicates that the species is currently listed endangered, but has been proposed for delisting.
Value,value	The taxon has two different statuses throughout its range. For example "LE,T(S/A)" indicates that the species is listed endangered in part of its range and threatened due to similarity of appearance in the remainder of its range.
(value)	The taxon itself is not named in the Federal Register as having listing status; however, it does have listing status as a result of its taxonomic relationship to a named entity. If a full species has federal status, then all of its associated infraspecific taxa worldwide receive the same status as the full species. However, infraspecific taxa that have listing status independent of the higher level taxon (i.e are specifically named in the Federal Register) are not affected.
(value,value)	The taxon itself is not named in the Federal Register as having USES status; however, all of its infraspecific taxa (worldwide) do have official status. The statuses shown in parentheses indicate the statuses that apply to infraspecific taxa or populations within this taxon.
(PS)	Partial status - status in only a portion of the species' range. Typically indicated in a "full" species record where an infraspecific taxon or population has listing status, but the entire species does not.
(PS:value)	Partial status - status in only a portion of the species' range. The entity with status is not recognized as a valid taxon by Central Sciences, typically because it is a population defined by geopolitical boundaries or defined administratively, such as experimental populations.
