

VIRGINIA AQUATIC RESOURCES TRUST FUND ANNUAL REPORT - 2019

June 2020

This document serves as the required annual reporting of the status and activities of the Virginia Aquatic Resources Trust Fund. The report includes a summary of the permitted impacts and liabilities; associated mitigation payments; and the projects and the associated credits proposed, constructed/implemented, and released to mitigate those impacts. This report provides information on the history of the Fund (1995-2019) and details specific activities conducted by the program in 2019 (January 1 – December 31, 2019).

The information is divided into the following sections:

I. Introduction – Provides general purpose and goals of the program, Conservancy's role and focus, and highlights of the program's continued operation.

II. Program Summary – Provides summary information on payments into and credits generated by the program from 1995-2019.

III. Summary of 2019 Credit Sales, Project Proposals, and Funding Authorizations – Provides a summary of the credit sales, proposed projects, and funds authorized during 2019.

IV. Project Identification Needs – Provides a summary of remaining liabilities, existing financial capacity and focus areas for the upcoming year.

V. Basin Summaries – Provides overview of basin status through projects, credits, and funding.

VI. Definitions – Provides program specific definitions used throughout the report.

VII. References – Provides links to useful reference documents relevant to the program operation.

I. Introduction

The Virginia Aquatic Resources Trust Fund (Program or Fund) is an in-lieu fee program established to provide compensatory mitigation for permitted wetland and stream impacts in Virginia. The Fund is administered by The Nature Conservancy (Conservancy) in accordance with a Program Instrument (Instrument) approved on July 14, 2019 by the Norfolk District of the United States Army Corps of Engineers (Corps) and the Virginia Department of Environmental Quality (DEQ). The 2019 Instrument replaces and supersedes the 2011 VARTF Program Instrument, which replaced the Virginia Aquatic Resources Trust Fund Program MOU, dated December 18, 2003 (2003 Amendment), which had in turn amended the Virginia Wetlands Restoration Trust Fund Program Memorandum of Understanding dated August 18, 1995 (1995 MOU).

A. PURPOSE AND GOALS

The purpose of the Fund is to provide a mechanism for compensatory mitigation for impacts to aquatic resources authorized by relevant federal and state laws and regulations, while maximizing the benefit to the aquatic environment and the public interest. The Program Instrument establishes guidelines, responsibilities and standards for the establishment, use, operation and maintenance of the Program in a way that brings the Program into compliance with revised regulations, as set forth in 33 CFR Part 332, governing compensatory mitigation for activities authorized by Department of Army permits. The parties

intend to achieve no net loss of existing wetland acreage and functions pursuant to Va. Code § 62.1-44.15:21(B), and to accomplish mitigation projects in Virginia efficiently, at meaningful scales, and in beneficial ecological contexts to provide for a significant net gain of aquatic resource functions and values wherever possible.

The Program may be used for compensatory mitigation for unavoidable impacts to waters, including wetlands, of the United States and state waters that result from activities authorized under Section 404 and/or 401 of the Clean Water Act (33 U.S.C. § 1251 *et seq.*), the Virginia Water Protection Permit Regulation (9 VAC 25-210 *et seq.*), and/or Section 10 of the Rivers and Harbors Act (33 U.S.C. § 403). More specifically, the Program may be utilized to provide compensatory mitigation for impacts permitted by the Corps or DEQ involving: (a) Corps General Permits; (b) DEQ General Permits; (c) Corps and DEQ Individual Permits and unauthorized activities; and (d) in other cases if agreed upon by the Corps, DEQ and the Conservancy. The Conservancy may, but is not obligated to, sell mitigation Credits. The Conservancy may elect, in its sole discretion, to reject specific Credit sales for impacts to sensitive or priority resources or based on the Conservancy's ability to mitigate for the impacts in the appropriate watershed. The sale of Credits by the Conservancy is subject to the Conservancy's policies regarding conflict of interest and corporate engagement and the Conservancy may decline to sell Credits to any applicant if doing so would violate Conservancy policies.

The purpose of compensatory mitigation is to offset impacts to waters of the U.S. and State waters, including wetlands and streams. Therefore, priority is given to mitigation that replaces lost functions and values of waters, wetlands and streams, as determined by the Interagency Review Team (IRT). Additionally, it is the intent of the signatories to the Program Instrument that the standards of specific compensatory mitigation sites or projects authorized under the Instrument will be equivalent to the standards of mitigation banks. Where possible and appropriate, the Program uses equivalent templates and policies as those used for mitigation banks in Virginia.

B. PROGRAM SERVICE AREAS

The areas in which this Program is authorized to provide compensatory mitigation required by Corps and DEQ permits (Service Areas) are the watersheds of the: Atlantic Ocean, Chesapeake Bay, Chowan River, Lower James River, Middle James River, Upper James River, New River, Potomac River, Rappahannock River, Roanoke River, Shenandoah River, Tennessee River and York River basins. These Service Areas are further described and illustrated in the Compensation Planning Framework for the Fund (www.nature.org/vartf - Trust Fund Instrument Exhibit A). The Fund's Annual Report tracks and reports program activities, including impacts, payments, and credits based on these larger basins (see Section IV). In its actual operations, Service Areas for specific Fund projects are often geographically limited within the major river watershed, and generally follow the Code of Virginia Section 62.1-44.15:23 which limits bank service areas to the same or adjacent fourth order sub-basin within the same major river watershed, with further limitations based on physiographic province as appropriate and approved by the IRT. Please note that impacts from the Big Sandy River were received into the Fund historically, but since 2008, the Fund no longer accepts funds related to, or as compensation for, impacts in the Big Sandy River watershed.

C. CONSERVANCY FOCUS

The Fund solicits, locates, designs, and implements projects in accordance with its approved Compensation Planning Framework. Largely based on the Conservancy's Conservation by Design approach, this framework helps to ensure that the Fund employs a watershed-based approach to compensatory mitigation. While the full Compensation Planning Framework is complex and quite detailed, the hallmark of this approach is identifying a watershed's most ecologically diverse, resilient, and significant aquatic resources and locating and implementing compensatory mitigation projects that protect and restore those resources. Thus, in addition to the compensatory mitigation provided by the approved wetland and stream projects, many of the Fund projects provide habitat for state and/or federal threatened or endangered species and have documented occurrences of Virginia Department of

Conservation and Recreation's Natural Heritage Elements and thus contribute to the protection of Virginia's rare plants, animals, and natural communities. And because they are located together in areas of significant aquatic resources, the Fund's mitigation sites provide greater ecological benefit than would an isolated project with the same mitigation activities. In addition, the large size of many of the projects (including both the mitigation areas and additional protected acreage) provide significant habitat for wildlife that depend upon large, contiguous forest blocks while providing additional buffering protection for aquatic resources. These projects may also provide corridors to connect other preserved properties. Examples of the Fund's contribution to larger conservation efforts include its work within the Clinch River watershed, along the Northwest River, and the Dragon Run (www.nature.org/vartf - 2011 Annual Report Attachments [D](#) and [E](#)).

D. PROGRAM AUDIT AND INSTRUMENT UPDATE

In 2016, the Program was audited, per a requirement of the 2011 Program Instrument. In consultation with the Interagency Review Team (IRT), the Conservancy determined that two separate audits were advisable: one covering the financial aspects of the Program, and one covering programmatic compliance. The full audit was completed in April 2016, and a complete summary can be found in the 2016 VARTF Annual Report.

In July 2016, DEQ reauthorized the Fund per State Water Control Law and the Virginia Water Protection Permit program requirements, Section 62.1-44.15:20-23 of the Code of Virginia and 9 VAC 25-210-116D. DEQ concluded that the Fund "demonstrates considerable compliance with state regulations for in-lieu fee program approval". DEQ provided recommendations for continued improvement of the Fund and reauthorized the Program for a period of three years, through July 14, 2019.

Throughout 2018, the Corps, DEQ and TNC continued to work closely to address improved efficiencies and efforts to offset existing liabilities. The Conservancy made considerable advances in new project identification and development, proposing multiple projects through the year, along with finalizing details for several Site Development Plans of existing projects, including final approval. Also conducted throughout 2018 were discussions and revisions to the VARTF Program Instrument, with suggested revisions provided to the IRT for public notice. The public notice and comment period were initiated on November 11, 2018 with the public comment period closing on December 8, 2018. Twelve comment letters were provided, including two received after the closing date, representing individuals, agencies, mitigation banking, consulting firms, public universities, and builder's associations. In early 2019, the Conservancy provided response to public comments and work continued on modifications to the Instrument. Final edits were completed in February and the Instrument modification was provided to DEQ and Corps supervisors for review and subsequent signature. The 2019 Amended and Restated VARTF Program Instrument was signed by the Corps, DEQ and the Conservancy in July 2019. The full Instrument document and exhibits are available at www.nature.org/vartf.

In February of 2019, following completion of the 2018 VARTF Annual Report, another progress update was provided to DEQ outlining the advancements made per the 2016 DEQ Reauthorization letter. DEQ public noticed their intent to reauthorize the VARTF program in April 2019 and comments were provided to the Corps and TNC in May. Per State Water Control Law and the Virginia Water Protection Permit program requirements, Section 62.1-44.15:20-23 of the Code of Virginia and 9 VAC 25-210-116D, DEQ reauthorized the VARTF program on July 3, 2019 for a period of 10 years with the effective date of July 14, 2019. The DEQ reauthorization letter is available at www.nature.org/vartf.

In May of 2019, the Corps and DEQ approved the increase in Advance Credits in three basins. These included non-tidal wetland credits in the Potomac River basin (40 Advance Credits) and the Atlantic Ocean basin (5 Advance Credits), and tidal wetland credits in the Chesapeake Bay basin (3 Advance Credits). Additionally, the fee schedule for the Potomac River basin non-tidal wetland credits was increased to \$200,000/credit. No further fee schedule changes are suggested at the time of this report.

As noted in previous reports, projects addressed in this report include those approved and, in many cases, completed under the previous 2003 MOU in addition to those approved and implemented in accordance with the new Instrument. It should be noted and clearly understood that projects approved under the previous MOU were grandfathered under the 2011 Instrument and are not subject to many of the new requirements. All projects approved since July 14, 2011 are subject to the terms outlined in the Instrument.

II. Program Summary 1995-2019.

From 1995 through December 31, 2019, the Fund has been used to mitigate for non-tidal wetland, tidal wetland, and stream impacts in the fourteen major river basins in Virginia. These impacts have generated \$79,536,100 in mitigation payments as summarized in Table 1. From these mitigation payments, the Corps and DEQ have authorized \$63,339,600 for the Conservancy to operate the Program and complete activities on 148 approved mitigation projects.

Table 1: The VARTF Account Summary (1995-2019)

	Mitigation Payments (\$)	Other Revenues (\$) ¹	Allocated Funds (to Projects) (\$) ²	Allocated Funds (Other) (\$) ³	Total Balance (\$)
Non-Tidal Wetlands	26,226,500	347,200	19,982,800	n/a	6,590,900
Tidal Wetlands	4,416,700	(14,500)	936,200	n/a	3,466,000
Stream USM	23,206,500	1,385,600	12,328,400	n/a	12,263,700
Stream pre-USM	22,433,500	890,000	23,358,700	n/a	(35,200)
General ⁴	3,252,900	7,121,000	n/a	6,733,500	3,640,400
TOTALS	79,536,100	9,729,300	56,606,100	6,733,500	25,925,800

¹Resource-specific Revenues include proceeds from land sales and transfer of funds. General Revenues includes interest.

²Includes both spent funds and funds reserved for approved projects, as well as spent staff salaries and expenses.

³Includes corrective actions funds, Statewide Development fund, remaining budgeted staff salaries and expenses, and bank service charges.

⁴Includes all financials not tracked by resource, including released credit sales.

Table 2 depicts the mitigation liability (in credits) for each resource for the Program through the end of 2019. Additionally, the table shows the number of credits proposed from the numerous mitigation projects approved, the number of credits that have been constructed or completed but not yet officially released, and the number of credits released. It should be noted that Unified Stream Methodology (USM) liabilities and credits represent only those impacts incurred and projects approved since the USM was approved and put into use in 2007. Pre-USM payments are discussed in Table 3.

Table 2: Liabilities and Credit Summary (1995-2019)

	Mitigation Liability (Credits) ¹	Proposed Credits ²	Completed/Constructed Credits ³	Released Credits ⁴	Total Credits ⁵
Non-Tidal Wetlands	551.57	100.56	300.57	775.11	1,176.24
Tidal Wetlands	10.65	5.68	48.85	30.80	85.33
Stream USM	51,558	61,180	3,953	28,828	93,961

¹Includes all liability accepted by the Fund from 1995 through 2019. This figure does NOT equal the number of impacts into the Fund (either acres for wetlands or linear feet for streams).

²Credits expected from Fund projects that have been approved by the IRT but have not yet been constructed/completed or released. These credits may ultimately be released as a result of meeting success criteria. While a certain number is proposed with each project, the actual number of credits released is a factor of design plans, any approved modifications, and the ability of the site to meet success criteria. This number can change.

³Credits from projects that have been constructed or completed but which have not yet met success criteria and been released by the IRT.

⁴Credits that have met success criteria, as determined by the IRT. This may include credits that do not address NNL and are thus are not available for debiting or sale until paired 1:1 with credits that do address NNL.

⁵Total credits expected based upon successful completion of all approved project sites.

Program-wide, VARTF is providing offsets that exceed liabilities. For non-tidal wetlands, the Fund has released nearly 50% more credits over the required offsets. Once all projects are completed, the Fund expects to generate over 2:1 leverage for non-tidal wetland impacts, with twice as much compensation provided than was required. Similarly, for tidal wetlands, the Fund has already released 3 times the amount of credits required to meet the liability of the Program. Once all projects are completed, the Fund will generate over 8 times the required compensation credits for the impacts using the Fund. For streams, the Fund has completed, constructed, or released credits to offset over 60% of the required liabilities. Significant stream credits are in development and under review with the IRT. Once complete, these projects will generate nearly twice the amount of required stream compensation credits for the Program.

Table 3 shows the number of pre-USM impacts the Fund received and the progress towards completing mitigation projects using the associated mitigation payments. These were impacts received prior to the initiation, approval and use of the USM methodology in January 2007. Due to the lack of standard stream mitigation crediting method prior to the USM, the programmatic goal agreed to by the Corps, DEQ and the Conservancy was to complete a combination of stream restoration, enhancement, and preservation projects with significant ecological benefit. Unlike with the wetland projects and subsequent USM liabilities, “crediting” of stream projects was not done for the Fund until projects were funded by impacts paid through the USM. Therefore, in this and previous annual reports, the mitigation activities for pre-USM stream projects are described with the associated linear footage and protected riparian buffer widths. With the approval of the Program Instrument in 2011, all un-allocated pre-USM stream monies were converted to USM stream liabilities using the established Advance Credit fee for those specific basins.

Table 3: Pre-USM Summary (1995-2019)

Impact (linear feet) ¹	Constructed/ Protected Mitigation (linear feet) ³	Closed Mitigation (linear feet) ⁴
167,690	363,864	240,683

¹Includes all pre-USM stream impacts received by the Fund.

²Includes all work that has been constructed and/or protected but have not received project closure status.

³Includes all work at sites that have received project closure status.

III. Summary of 2019 Credit Sales, Project Proposals, and Funding Authorizations (January 1, 2018 – December 31, 2019)

As required by the 2008 Mitigation Rule, a complete listing of permits and impacts paid into the Fund, including advance credit sales, is provided below in Table 4. This provides the detail of credit sales and use of the Program as a mitigation provider throughout 2019. The permit number, date of credit sale, location, resource type and amount, as well as the credit type are provided. Credit type is either Advance Credit or Released Credit, as defined in the Definitions section of this report and further in the program Instrument.

Table 4: Summary of 2019 Permits and Credit Sales

Permit Number	Sale Date ¹	Basin	HUC	Impact		Required Mitigation		Credit Type ²

During 2019, the Fund was used to mitigate for non-tidal wetland, tidal wetland, and stream impacts throughout Virginia. These impacts from the 47 permits detailed in Table 4 above generated \$4,430,800 in mitigation payments to the Fund as summarized in Table 5. In 2019, \$3,786,400 was allocated to support implementation of compensation projects. At the end of 2019, the unallocated balance within the Fund was \$25,925,800.

Table 5: 2019 Financial Summary

	Mitigation Payments (\$)	Other Revenues (\$) ¹	Allocated Funds (\$) ²	Allocated Funds (Other) (\$) ³	Total Balance for 1995-2019 (\$)
Non-Tidal Wetlands	1,337,800	(\$2,500)	1,116,000	n/a	6,590,900
Tidal Wetlands	5,000	(\$13,800)	625,000	n/a	3,466,000
Stream USM	2,492,100	(\$69,800)	1,595,100	n/a	12,263,700
Stream pre-USM	0	\$447,900	450,300	n/a	(35,200)
General ⁴	595,900	194,800	n/a	571,000	3,640,400
TOTALS	4,430,800	556,600	3,786,400	571,000	25,925,800

¹Includes proceeds from land sales and transfer of funds.

²Includes both funds that have been spent and funds that the IRT has approved for allocation to approved mitigation project in 2019.

³Includes staff salaries and expenses, bank service charges and contingency fund activity.

⁴Includes all Fund monies not tracked by aquatic resource type or by basin, including interest.

Below, Table 6 depicts the 2019 status and activity of the VARTF Endowment Fund for stewardship and long-term management activities. Also provided is the status and activity of Programmatic Funds, as described in the VARTF Instrument, that are within the Fund account to be used as needed, or when approved by the IRT for project needs throughout the state. In 2019, no funds were put into or used from the VARTF Endowment Fund. These transfers occur only when project protection deeds are recorded, or Long-term Management Plans and budgets are approved. Several transfers into the VARTF Endowment Fund are anticipated in 2020. The Contingency Fund was used for the first time since its creation in 2011, for repair expenses at the MJ-5 Meadow Creek stream restoration site. Considerable funds were required for this effort and a plan was presented to the IRT to replenish the Contingency Fund through Released Credit sales (up to 25% of the total Released Credits sold each year). In 2019, the IRT approved use of nearly \$380,000 from the Contingency Fund and VARTF returned nearly \$149,000 through Released Credit Sales.

Table 6: 2019 Individual Fund Tracking

	Funds Received	Funds Spent / Transferred Out	Current Balance
Stewardship and Long-Term Management (LTM) Fund	\$0	\$0	\$54,783
Contingency Fund	\$148,975	\$378,038	\$270,937
Statewide Development Fund	\$0	\$10,495	\$432,380

During 2019 eight projects were approved for funding. Four sites included funding for acquisition and initial project development expenses. The CH-19 and RO-11 projects are for credit purchases from existing mitigation banks. RO-9 Tate site is proposed to generate stream and non-tidal wetland credits in the Roanoke River basin, sufficient to satisfy all the remaining stream obligations within the basin. The UJ-4 Cole project is proposed to generate considerable non-tidal wetland credits in the Upper James River basin, sufficient to offset all remaining liabilities within this basin. Project and funding approvals included development and initial design costs to complete necessary tasks through Site Development Plan submissions.

The CB-17 Thompson project has been in development, and funding was approved in 2019 to include the acquisition of fee title to the project lands. Funding for RP-15 was approved to continue with project development and potential expansion of the project to include wetland mitigation. One project (LJ-14 Fowlkes) had the final budget approved following completion, approval and signature of the project Site Development Plans. Additional funding was also approved for the MJ-5 Meadow Creek project to accommodate necessary stream repairs.

Several projects were submitted to the agencies through the pre-application or proposal process, including sites in the Atlantic Ocean Potomac River, Shenandoah River, and Tennessee River basins. Two projects were put out for public notice (CH-18 and SH-6), and the Corps provided Initial Evaluation Letters (IEL) for three projects.

All projects are required to have an approved Site Development Plan (SDP) which documents the details of the mitigation project. The first SDP submitted under the 2011 Program Instrument was submitted in December 2013 and received approval and was signed in March 2015. Considerable effort continues to be made in development, review and approval of project SDPs. In 2018, two SDPs were finalized and signed (TN-10 and TN-11), three SDPs (SH-6, CB-17, and LJ-14) are in review, and two additional SDPs were submitted (AO-6 and NW-3). In 2019 one SDP was finalized and signed (LJ-14), and considerable progress and coordination was made on the SDPs for NW-3 and CB-17. The SDP for AO-6 was withdrawn when the project was withdrawn and closed. Three additional SDPs were submitted for IRT coordination and review (AO-4, CB-22 and PO-8).

Also, in 2019, the Fund received approval on six stream sites for the release of 10,114 stream credits and four wetland sites for the release of 8.29 non-tidal wetland credits based on meeting success criteria and project milestones as shown in Table 7. Credits proposed or completed on projects in development are also shown in Table 7.

Collectively, in 2019, the Conservancy submitted the following items to the Corps and DEQ for approval by the Corps, or coordination with the IRT. Corresponding number of approvals are noted in parenthesis. Where higher numbers are indicated in parenthesis, this indicates requests that were submitted in previous years and were approved in 2019.

- 7 mitigation monitoring reports (N/A)
- 11 project closure requests (0)
- 4 credit release requests (9)
- 3 pre-app/proposal requests
- 9 funding requests (8)

Table 7: 2019 Mitigation Liabilities and Credit Activities

	Mitigation Liabilities Received (Credits)	Proposed Credits ²	Completed/Constructed Credits ³	Released Credits ⁴
Non-Tidal Wetlands	24.44	26.97	0.00	8.29
Tidal Wetlands	0.01	0.00	0.00	0.00
Stream USM ¹	1,613	0.00	0.00	10,114

¹Includes all liability accepted by the Fund in 2019. This does NOT equal impacts into the Fund.

²Credits expected from Fund projects that have been proposed or approved by the IRT but have not yet been constructed/completed or released. These credits may ultimately be released as a result of meeting success criteria. While a certain number is proposed with each project, the actual number of credits released is a factor of design plans and modifications and the ability of the site to meet success criteria. This number can change.

³Credits from projects that have been constructed or completed but which have not yet met success criteria and been released by the IRT.

⁴Credits that have met success criteria, as determined by the IRT.

Table 8 shows the credit releases approved by the IRT during 2019 by project site. These credit releases included credits for non-tidal wetland and stream credits across nine sites in six of the major river basins in which the Fund operates.

Table 8: 2019 Credit Releases + Purchases

Site	NTW	Tidal	Stream
BS-2	0.153		1,293
CH-19			1,335
LJ-11			179
LJ-16			7,000
RP-5	0.28		
RP-11	1.86		
RO-11	6		
TN-10			166
TN-11			141
TOTALS	8.293	0	10,114

In 2019, the IRT authorized funds for the Conservancy to complete activities on eight different sites. Two sites included funding for acquisition and initial project development expenses (RO-9 and UJ-4). Two stream and wetland credit purchases were approved (CH-19 and RO-11). Additionally, one projects had final budget approved following completion, approval and signature of the project Site Development Plans (LJ-14), and additional funds were approved for three projects. Details are provided in Table 9.

Table 9: Projects Approved and Funding Authorized in 2019

Project ID	Project Name	Resource Type	New Proposed USM Stream Credits	New Proposed Wetland Credits	Funds Authorized
CB-17	Dameron Marsh (Thompson, W)	Tidal	n/a	n/a	\$ 625,000
CB-17	Dameron Marsh (Thompson, W)	Non-Tidal Wetland	n/a	n/a	\$ 700,000
CH-19	Cheroenhaka Mitigation Bank (credit purchase)	Stream	1,335	n/a	\$ 233,625
LJ-14	Lower Chickahominy River (Fowlkes/Wills)	Stream	n/a	n/a	\$ 73,746
MJ-5	Rivanna River (Meadow Creek)	Pre-USM	n/a	n/a	\$ 450,335
RP-15	Hazel River (Adduci)	Stream	n/a	n/a	\$ 112,694
RO-9	Bluestone Creek (Tate)	Stream	4,365	n/a	\$ 384,894
RO-11	Bannister Bend (credit purchase)	Non-Tidal Wetland	n/a	6	\$ 360,000
UJ-4	James River (Cole)	Non-Tidal Wetland	n/a	18.61	\$ 56,000
Totals:			5,700	24.61	\$ 2,996,294

IV. Project Identification Needs

The section provides a programmatic summary of remaining liabilities. Remaining liabilities are defined here as existing liabilities that will not be offset by an existing proposed, initiated or approved project. Further details about basin specific standings are provided in Section V.

Since its inception, the Fund has accepted liability for 562.22 wetland credits and 51,558 stream credits, and has proposed, initiated, constructed or released credits to offset 1,261.57 wetland and 93,961 stream credits (see Table 2). Programmatically and statewide the credits generated by the Fund will far exceed the impacts and credit liability taken on by the program. Even so, there are several basins where liability remains, and offsets are needed. The remaining liabilities are shown below in Table 10 and are either relatively small cumulative impacts or are the result of very recent credit sales occurring in 2019. Potential sites to address these liabilities have not yet been identified. Table 10 depicts the basins and resources with project needs based on the age of the impacts (initial Advance Credit sales), with 2 years as a practical demarcation based on Program operations. The needs shown in yellow (greater than 2 years) have the most immediate need for offset. Approximately 2/3 of the remaining liability shown below occurred within the past two years, the majority of which were transacted in 2019.

Table 10: Remaining Liability (as of 12/31/19)

Basin	Resource	Liability (credits)	
Middle James River	Non-tidal Wetland	6.75	<2 years
Potomac River	Non-tidal Wetland	1.52	<2 years
Potomac River	Stream	7	<2 years
Lower James River	Stream	956	<2 years
Atlantic Ocean	Tidal Wetland	1.12	>2 years
Chesapeake Bay	Stream	1122	>2 years
Chowan River	Stream	245	>2 years
New River	Non-tidal Wetland	1	>2 years
Potomac River	Tidal Wetland	1.7	>2 years

Adequate funding is available to fulfill project needs and offset all remaining liabilities in each basin as shown in Table 11 below.

Table 11: Available Funding

Basin	Resource Type	Impacts	Available Funding
Middle James River	Non-tidal Wetland	6.75	\$1,300,000
Potomac River	Non-tidal Wetland	1.52	\$800,000
Potomac River*	Stream	7	\$100,000
Lower James River	Stream	956	\$900,000
Atlantic Ocean	Tidal Wetland	1.12	\$250,000
Chesapeake Bay	Stream	1122	\$375,000
Chowan River	Stream	245	\$124,000
New River	Non-tidal Wetland	1	\$350,000
Potomac River	Tidal Wetland	1.7	\$1,000,000

*Considerably more funding is available within the Potomac River stream resource, yet additional funding is required to fully implement PO-8. The full project budget will be approved with SDP approval, likely in 2020. The amount presented here is a generous allocation for the current stream liability.

Table 12 shows the total remaining credits of each resource type for which the Fund is liable, along with a cumulative total of the funding available for each of these resources from only those basins listed in Table 11. The fundingcredit calculation represents the average funding available for new projects of each specific resource type. The expected cost for the Conservancy to implement projects to provide the necessary offsets is generally lower than the available cost/credit. For non-tidal wetlands, the available funds average a cost/credit above all of the Advance Credit prices of the Program, and well

above the expected costs for Conservancy-managed compensation sites. For tidal wetlands, the available funds average a cost/credit is nearly \$450,000/credit; again, above the expected costs for the Conservancy to offset the liabilities. For streams, the available funds average a cost/credit above the Advance Credit fee price for most basins, and well within the anticipated range to address the remaining stream liabilities.

Table 12: Funding Calculations

Resource Type	Impacts	Available Funding	Available Funds/Credit
Non-tidal Wetland	9.27	\$2,450,000	\$264,000
Stream	2330	\$1,499,000	\$643
Tidal Wetland	2.82	\$1,250,000	\$443,000

It is important to recognize that the Fund includes unallocated General funds totaling over \$2M that can be used to help offset these existing liabilities if the above funding is not enough, or if the Conservancy chooses to do a larger project rather than the relatively small project needs identified above.

V. Summary of Credit Sales, Project Proposals, and Funding Authorizations per Basin

This section details the credits sales, project proposal and associated credits generated, and funding authorizations per basin. As stated in its Instrument, the Fund tracks and reports its activities, including impacts, payments, and credit balances, based on Virginia’s major river basins. This section of the report consists of this basin-specific information, usually presented in three tables for each basin. Additional information about these tables is provided below, including a discussion of issues that may arise from reporting credit balances on a basin-wide basis when actual, operational service areas are smaller than the entire basin.

A. Basin Financial Summary Tables – The first table provided for each basin outlines the funding information related to each resource type (non-tidal wetlands, tidal wetlands, USM streams, and pre-USM streams). Funding information is provided for mitigation payments, funds returned through land sales, funds allocated to approved projects, and the resulting balances.

It is important to note that the pre-USM information in these tables is provided simply to give the reader information on how much funding the Program received for this resource type through historic mitigation payments. The Fund receives no pre-USM payments at present (nor will it in the future), and all existing pre-USM monies have been allocated to approved projects.

B. Basin Pre-USM Impacts and Mitigation Activity Summary Tables – These tables provide information on pre-USM impacts and associated mitigation activities on a basin-wide basis. While these projects do not have a credit-based mitigation liability and will not generate credits when completed, they do represent on-going work by the Fund to address pre-USM mitigation impacts.

The tables include the amount of impacts received by the Fund between 1995 and 2011. They also identify the amount of stream length (linear footage) from approved projects that have not been completed to date (either constructed or protected), along with the stream length (linear footage) from those projects that have been constructed or protected. The final column in the table identifies the amount of linear footage from projects that have completed all aspects of the project and are closed.

C. Basin Liabilities and Credit Balance Summary Tables – Following the 2008 federal mitigation rule and the approval of the Instrument, the operational currency of the Fund has been wetland and stream credits. These tables provide the Fund’s version of a basin-wide credit ledger and address mitigation liabilities and credits within each basin for non-tidal wetlands, tidal wetlands, and USM streams.

These tables provide information on the status of the Fund’s credit liabilities and balances in a given basin, including total and no net loss (NNL) liabilities, released credits, released credits applied to liabilities, sold released credits, available released credits, and remaining credit release potential based on approved projects.

Below, please find some explanations for the information that is provided in each row of the Basin Liabilities and Credit Balance Summary Tables. Section V (Definitions) may provide additional useful information.

Row Identifier	Notes
Total Credit Liability (including advance credit liability)	Includes all liabilities accepted by the Fund in this basin from 1995 through 2017, including liabilities from Advance Credit sales.
<i>Total No Net Loss (NNL) Liability (including advance credit liability)</i>	A subset of Total Credit Liability. While expressed in credits, NNL Liability for wetlands equals the number of acres impacted. For streams, NNL is ½ of Total Credit Liability.
Released Credits addressing NNL	For wetlands, credits generated by restoration and/or creation activities. For streams, credits generated by restoration and/or enhancement activities.
Released Credits not addressing NNL	The Fund is required to address mitigation liabilities using at least 50% NNL credits. Thus, the number of Released Credits not addressing NNL can be less than or equal to but cannot exceed the number of Released Credits addressing NNL.
Total Released Credits	The Fund’s credits are not released in a given service area unless all the liabilities (including NNL liability) in that service area have been met. The Fund’s operational Service Areas may be smaller than and not equal to the entire basin.
Released Credits Applied to Total Liability	Since an individual project’s Service Area may not equal the full basin, released credits within a basin may not be approved to service all the liabilities within the full basin.

Released Credits Available

Assuming Total Credit Liability and NNL liability are met,
Total Available Released Credits = Total Released Credits
– Released Credits Applied to Liability – Sold Released
Credits.

Advance Credits Available

Advance Credits will only be sold in areas not serviceable
by released credits.

Credits available for release when they can be
paired 1:1 with wetland creation/restoration
credits OR stream restoration/enhancement
credits

These are credits that have met success criteria and are
ready for release. The IRT will officially release them
when they can be paired 1:1 with Released Credits
addressing NNL. Until then, these credits are held in
reserve.

Potential Credits

The remaining number of credits from approved Fund
project sites that may be released if they meet success
criteria (does not include figure from row above).

There are challenges with reporting credit balances at a basin-wide level when liabilities and credit balances are ultimately calculated at the scale of smaller Service Areas. When the Fund tracks its liabilities, determines released credit balances, or sells released credits to address a specific impact, the smaller project-specific Service Areas are determinative, not the overall basin. Indeed, credits in a basin's total come from individual projects that may have smaller, more confined geographic service areas. Thus, while these tables report figures such as "Total Available Released Credits" for each basin, in many cases not all those credits are available to mitigate for impacts across the entire basin. For purposes of demonstration, consider this hypothetical example: Basin X has a total of 100 credits released and available for sale. But 60 of those credits can only service the northern half of that basin, while the remaining 40 credits service the southern half. One hundred credits is an accurate figure overall, but it is not directly relevant at the scale that these credits will actually be debited and sold.

Based on these unavoidable reporting issues with a basin-wide credit ledger and the fact that this annual report provides a snapshot in time of credit balances, it is recommended that the reader consult the RIBITS website (<http://geo.usace.army.mil/ribits/index.html>) for up to date information on released credit balances and associated Service Areas. Additional information regarding individual project crediting is also available at the Program website (www.nature.org/vartf; see Project Credit Balances per Basin).

Atlantic Ocean

Within the Atlantic Ocean basin, the Fund has four approved projects to address wetland impacts. Three of the projects approved involve submerged aquatic vegetation restoration and oyster restoration. The results of these projects are not shown on the following tables, as they are considered 'out of kind' mitigation. To date, there have been no stream impacts within this basin. In 2016, the Conservancy proposed a wetland mitigation site to the IRT. A feasibility study was completed, and the project went to public notice in 2017. An Initial Evaluation Letter for AO-6 was issued in 2018. A funding request was submitted and approved for this project, and a complete Site Development Plan was submitted to the IRT in 2018. In 2019, the AO-6 project was withdrawn due to complex and increasingly unknown site conditions and the potential doubling, or more, of the project budget. Additional sites were considered for feasibility and evaluated in late 2019 with a new project being developed for proposal to the IRT in early 2020. The Site Development Plan for AO-4 was submitted in 2019. These two projects (AO-4 and AO-7 – in development) are expected to fully offset the existing liabilities for non-tidal wetlands in the Atlantic Ocean basin. A very small liability (1.12 credits) remains for tidal wetlands.

Table 13: Atlantic Ocean Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance
Non-Tidal Wetlands	\$459,300	\$0	\$175,100	\$284,200
Tidal Wetlands	\$495,400	\$0	\$241,100	\$254,300
Stream USM	\$0	\$0	\$0	\$0
Pre-USM Stream	\$0	\$0	\$0	\$0
TOTALS	\$954,700	\$0	\$416,200	\$538,500

Table 14: Atlantic Ocean Basin Liabilities and Credit Balance Summary (1995-2019)

	NON-TIDAL WETLANDS	TIDAL WETLANDS*	STREAM - USM	
Total Credit Liability (including advance credit liability)	7.18	1.70	0	Liabilities
<i>Total No Net Loss (NNL) Liability (including advance credit liability)</i>	<i>4.99</i>	<i>1.70</i>	<i>0</i>	
Released Credits addressing NNL	0.00	0.00	0	Released Credits and Liability Status
Released Credits not addressing NNL	0.00	0.60	0	
Released Credits (Other) ¹	0.00	4.00	0	
Total Released Credits	0.00	4.60	0	
Basin NNL Liability Met?	No	No	N/A	
Basin Total Liability Met?	No	No	N/A	
Release Credits Applied to Total Liability ²	0.00	0.58	0	AvailableCredits
Released Credits Sold	0.00	0.00	0	
Released Credits Available	0.00	0.00	0	
Advance Credits Available	5.00	1.38	5,000	
Credits available for release when they can be paired 1:1 with wetland creation/restoration credits OR stream restoration/enhancement credits	0.00	0.00	0	Credit Potential
Potential Credits	3.52	0.00	0	
Current Liabilities	7.18	1.12	0	

¹Released Credits Available from AO-1 and AO-3 are Submerged Aquatic Vegetation (SAV) credits.

²In 2017 approximately 0.58 tidal wetland NNL credits were offset by 0.60 tidal wetland Preservation credits from AO-2.

*No Net Loss (NNL) Liability in this basin is not necessarily equivalent to the acres impacted.

Big Sandy River

The Fund no longer accepts impacts from the Big Sandy but has remaining liabilities that are addressed through one project, BS-2. Previous decisions were made to allow use of some stream funds from the Big Sandy to fund several projects in the Tennessee River basin. The mitigation activities summaries for those projects are included on Table 44. The Conservancy requested funding and approval to purchase wetland and stream credits from the Dry Fork Mitigation Bank. This request was approved in 2018, and the credit purchase was completed in 2019. All liabilities for VARTF in the Big Sandy are offset and all activities have been completed for this basin, for both funding and liabilities.

Table 15: Big Sandy River Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance
Non-Tidal Wetlands	\$8,000	\$0	\$8,100	(\$100)

Current Liabilities	0.00	0	

Chesapeake Bay

The Chesapeake Bay basin has seen considerable non-tidal wetland impacts, and the Conservancy has pursued twenty-two projects within this basin. Several of these projects are well established, several others are newly constructed and in the first years of mitigation monitoring, and yet another is expected to be constructed immediately following approval of a Site Development Plan. The first USM stream impacts within this basin were received in 2014. Throughout 2019, the Fund and the IRT continued to work through review and approval of the SDP for CB-17. Final approval is expected in 2020. Funding to complete the fee title acquisition of the CB-17 site was approved in 2019. The SDP for CB-22 was also submitted in 2019.

The Fund has existing projects in the ground, in development and in monitoring that will offset all non-tidal and tidal wetland impacts. Stream liabilities remain, and an RFP was released in 2018 to solicit projects to offset these liabilities, though no proposals were submitted. The Conservancy is actively looking for a suitable stream project.

Table 18: Chesapeake Bay Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance
Non-Tidal Wetlands	\$7,942,200	\$182,300	\$5,898,600	\$2,225,900

¹ In 2017, 0.70 tidal wetland NNL credits were offset by 0.70 tidal wetland Preservation credits from CB-5.				
² Conservation Easement credits.				
*No Net Loss (NNL) Liability in this basin is not necessarily equivalent to the acres impacted.				

Chowan River

The Fund has pursued many non-tidal wetland restoration projects within this basin. Thus, there are many wetland credits released and available for sale to service the eastern HUC's within this basin. Advance credits are available for sale in areas of the basin where Released Credits are not yet available. The Conservancy submitted a draft site development plan to the IRT for review and approval for the CH-17 stream restoration project in 2015, however after IRT review, and consideration of the site as only a wetland project, the project will no longer move forward, and the project was closed in 2018. The Conservancy submitted a pre-application request for a wetland restoration site within this basin to offset all remaining non-tidal wetland liabilities, with the IEL provided in 2019.

With the determination that CH-17 will not move forward, stream liabilities remained. A proposal was submitted in 2019 to purchase bank credits to offset the majority of stream liabilities within this basin. The proposal was approved, and the credit purchase was completed in 2019, with only a small stream liability remaining.

Table 21: Chowan River Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance
Non-Tidal Wetlands	\$1,784,500	\$126,300	\$1,909,300	\$1,500
Tidal Wetlands	\$37,900	\$0	\$10,200	\$27,700
Stream USM	\$580,200	\$17,500	\$473,400	\$124,300
Pre-USM Stream	\$94,700	(\$17,500)	\$77,300	(\$100)
TOTALS	\$2,497,300	\$126,300	\$2,470,200	\$153,400

¹In 2017, 0.07 tidal wetland NNL credits were offset by 0.14 tidal wetland Preservation credits from CH-12.

*No Net Loss (NNL) Liability in this basin is not necessarily equivalent to the acres impacted.

Lower James River

The Fund has pursued several wetland restoration sites within the Lower James basin, and has received approval of credit releases from several projects. With completion of a large restoration site and credit releases in 2013, the Fund has released non-tidal wetland credits available for sale in the Lower James River basin. The first site development plan for the Fund was approved in February 2015 for the LJ-11 site and construction on the associated stream restoration began in 2016 and was completed in 2017. A second SDP was approved in 2019 for LJ-14. Two stream credit releases were approved or completed for the Fund in 2019.

The Fund has zero liability for non-tidal wetlands in this basin. There is an existing liability for tidal wetlands which is expected to be fully offset in 2020 with a credit release from LJ-10, which was submitted in 2019. The existing liability for streams will be offset by existing projects with only a very small remaining due to recent credit sales in 2019.

Table 24: Lower James River Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance

*No Net Loss (NNL) Liability in this basin is not necessarily equivalent to the acres impacted.

Middle James River

In 2012, the Fund completed construction on its largest stream restoration project to date at Meadow Creek. Monitoring of stream and wetland sites continued through 2019 with funding for significant repairs approved.

All stream liabilities have been offset within this basin. Additional existing non-tidal wetland liabilities will be offset by final credit release at MJ-1. The remaining liability is due to recent impacts into the Fund. The Conservancy is actively looking for a suitable project to address these liabilities.

Table 27: Middle James River Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance

Upper James River

Work in the Upper James has been limited to non-tidal wetlands, with just a few acres of impacts in the basin. There have been no stream impacts paid into the Fund.

The existing liability for non-tidal wetlands will be offset in part by the final credit release from UJ-1 which will be submitted in 2020. In 2018, the Conservancy submitted a pre-app and then full proposal for a new wetland project, UJ-4. This project went out to Public Notice in 2018, and the IEL was issued in 2019. This project is expected to fully offset the existing liabilities.

New River

The New River basin has seen a relatively small amount of wetland impacts and has two approved projects to address the existing liabilities in the basin. One stream project was constructed in 2013, and a credit release was approved in 2017. The NW-3 project is in development to address wetland and stream liabilities, as well as restore bog turtle habitat. The full design plan was presented and coordinated with the IRT, after which the Site Development Plan for this site was submitted to the agencies in late 2018. Review and coordination with the IRT took place in 2019, and the SDP is expected to be finalized and signed in 2020.

The existing projects NW-1 and NW-3 are expected to fully satisfy the existing liabilities in the New River basin, though a small amount of restoration acreage (less than 1 acre) is needed to accomplish no-net loss in this basin.

Table 33: New River Basin Financial Summary (1995-2019)

Potomac River

There has been considerable mitigation activity in the Potomac River basin, especially with stream impacts and more recently non-tidal wetlands. The Fund has developed several wetland sites that have generated Released Credits, including some that are currently available for sale. One additional wetland credit release was approved in 2017. Several stream projects were pursued to address pre-USM stream impacts. Monitoring is ongoing for the restoration sites, although these sites do not generate stream credits. The second phase of a large stream restoration project is currently in development with pre-app, full concept plan development, land protection, and historical survey completed. The complete Site Development Plan was submitted in 2019 for this site.

Very recent use of the Fund has generated new non-tidal wetland liabilities. The Conservancy is evaluating a potential project to address these impacts, having completed a pre-app submission and site visit with the IRT in 2018. A full proposal was submitted in 2019, with the IEL expected in 2020. Tidal wetland liabilities also remain. The Conservancy released an RFP in 2018 to solicit suitable projects to offset these liabilities. The existing stream liabilities will all be offset by the implementation of existing project PO-8.

Table 36: Potomac River Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance
Non-Tidal Wetlands	\$2,403,500	\$0	\$1,582,700	\$820,800

¹In 2017, 0.41 tidal wetland NNL credits were offset by 0.71 tidal wetland Preservation credits from PO-6.

Rappahannock River

The Fund has pursued several wetland projects within the Rappahannock River basin, which have generated credits in excess of the existing liability and Released Credits are available for sale. In 2018, the Conservancy proposed a project to fully offset the full mitigation liability of streams within this basin. A pre-app site visit, full proposal, public notice, and funding request were all proposed and approved in 2018. The Conservancy acquired the property in December and is advancing the project through Site Development Plan, expected to be submitted in 2020.

With implementation of approved projects, all liabilities within the Rappahannock Basin will be fully offset.

Table 39: Rappahannock River Basin Financial Summary (1995-2019)

*No Net Loss (NNL) Liability in this basin is not necessarily equivalent to the acres impacted.

Roanoke River

The Fund has only had moderate wetland impacts within the Roanoke River basin and has constructed one wetland restoration site to address a significant portion of the liability. Several stream projects have been implemented to address stream impacts. In 2018 a pre-app and proposal were submitted for a stream and wetland project. The project, RO-9 is in development as full delivery with SDP submission expected in 2020. RO-9 is expected to offset all stream impacts within the basin. In 2019, the Conservancy requested and was approved to purchase wetland credits to offset the remaining liability within the basin. Credit purchase is expected to be completed in early 2020.

Shenandoah River

The Fund implemented a wetland restoration project in 2012 to address most of the wetland impacts within this basin. Several stream projects have been developed and are in the monitoring phase. A stream project (SH-6) was approved in 2014 to address the remaining stream liability in the Shenandoah basin.

The existing wetland liabilities will be offset in part by the SH-4 project. Additionally, SH-6 was proposed for expansion to include wetland restoration. This proposal was approved in 2019. All existing stream liabilities can be fully met by implementation of stream compensation activities at existing projects SH-2 and SH-6.

Tennessee River

The Fund implemented construction on a sizable wetland restoration site in 2012. Site development plans have been approved and signed for two stream projects, TN-10 and TN-11. Stream credits were released from both of these sites in 2018 and 2019. An RFP was issued to solicit suitable projects for wetlands mitigation in this basin in 2018. As a result, the Conservancy requested to purchase credits from a bank site in development, which is currently under review by the IRT.

All existing stream liabilities will be offset by approved projects TN-10 and TN-11. Wetland liabilities will be offset by the credit purchase, when approved, and existing projects currently in monitoring.

Advance Credits Available	1.77	3,948	
Credits available for release when they can be paired 1:1 with wetland creation/restoration credits OR stream restoration/enhancement credits	0.00	265	Credit Potential
Potential Credits	9.19	3,086	
Other Credits ¹	0.00	604	
Current Liabilities	15.33	1,052	

¹Adjustment Factor credits.

York River

Several wetland projects have been implemented to address the wetland liability within the York River basin. There is one tidal restoration project in the ground to address the tidal impacts within this basin. Released Credits for the York River basin are available for sale. There have been relatively few stream impacts in this basin and in 2017, the Conservancy purchased 9 bank credits to satisfy the existing liability in this basin. Credit releases were approved for both non-tidal and tidal wetlands in 2018.

There are no existing liabilities for either non-tidal wetlands or streams in the York River basin. The remaining liabilities for tidal wetland will be offset through release of credits from the existing YK-5 project.

Table 51: York River Basin Financial Summary (1995-2019)

	Mitigation Payments	Other Revenues	Allocated Funds (to Projects)	Total Balance
Non-Tidal Wetlands	\$1,168,600	\$28,500	\$1,197,200	(\$100)
Tidal Wetlands	\$505,300	(\$700)	\$40,300	\$464,300
Stream USM	\$5,400	\$0	\$5,400	\$0
Pre-USM Stream	\$163,200	\$32,700	\$195,700	\$200
TOTALS	\$1,842,500	\$60,500	\$1,438,600	\$464,400

Table 52: York River Basin Pre-USM Impacts and Mitigation Activity Summary (1995-2019)

Impact (linear feet)¹	Constructed/ Protected Mitigation (linear feet)³	Closed Mitigation (linear feet)⁴
1,282	13,817	978

Table 53: York River Basin Liabilities and Credit Balance Summary (1995-2019)

	NON-TIDAL WETLANDS	TIDAL WETLANDS*	STREAM - USM	
Total Credit Liability (including advance credit liability)	17.29	1.68	9	Liabilities
<i>Total No Net Loss (NNL) Liability (including advance credit liability)</i>	<i>9.12</i>	<i>1.61</i>	<i>5</i>

Current Liabilities	0.00	1.06	0	

¹Enhancement and buffer restoration credits.

*No Net Loss (NNL) Liability in this basin is not necessarily equivalent to the acres impacted.

V. DEFINITIONS

1. **ADMINISTRATIVE FEE** – Monies provided to the Conservancy, amounting to 8% of deposited funds, which are deemed to represent and reimburse reasonable overhead and related administrative cost of administering the Fund. Prior to approval of the 2011 Program Instrument the fee was 3%.
2. **ADVANCE CREDITS** – Credits that are not associated with a compensatory mitigation project and are available for sale prior to initiation of a mitigation project in accordance with the approved Instrument.
3. **ALLOCATED FUNDS** – Monies from the Program Account that have been authorized, by the IRT, for use on specific projects or needs of the Program. These funds are no longer available for use towards other projects or purposes.
4. **AVAILABLE CREDITS** – Credits that have been approved for use by the Corps and DEQ and have not been attributed to permits. Available Credits may be Advance Credits or Released Credits.
5. **CORRECTIVE ACTION FUNDS** – As used in Table 1, this identifies a portion of the Program funds that are reserved and available to fund site management or corrective action activities on existing projects. These funds are expected to accommodate sites that were approved prior to the requirement for formalized budgets for long-term management and to cover catastrophic events. This budget item was approved and reported in the 2011 VARTF Annual Report.
6. **CLOSED PROJECTS** – These project finances are no longer being tracked on an annual basis. All credits that will be derived from these projects have been released, but "closed" does NOT mean that all credits have been sold, as released credits from the project may still be available for sale by the Program.
7. **COMPENSATION** – Actions taken which have the effect of mitigating for, or substituting some form of, aquatic resource lost or significantly disturbed due to a permitted activity; generally aquatic resource preservation, restoration, enhancement or creation.
8. **COMPLETED or CONSTRUCTED CREDITS** – Represents an ESTIMATE of credits that have been protected (preservation activities) or constructed (restoration or enhancement activities) through site development activities. These estimates represent activity and progress of the Fund's mitigation projects, but are distinct and different from credits that have been formally released by the IRT.
9. **CREDIT** – A unit of measure representing the accrual or attainment of aquatic resource function, condition or other performance measure at a Mitigation Site. It is also used to represent the mitigation liability of the Program.
10. **DEBIT** – A unit of measure representing the reduction of available Credits corresponding to the loss of aquatic resource functions at an impact or project site.
11. **EQUIPMENT FUND** – This portion of the Program funds were identified and approved for use to acquire and maintain GPS units.
12. **FUNCTIONS** – The physical, chemical and biological ecosystem processes of an aquatic resource without regard to its importance to society.
13. **HYDROLOGIC UNIT CODE** – Divisions of the watersheds of the United States. For the purposes of this Agreement, Hydrologic Unit Code ("HUC") shall refer to those divisions as defined by the United States Geological Survey ("USGS").
14. **IN-LIEU FEE PROGRAM ACCOUNT (THE "ACCOUNT")** – An account at a financial institution which contains any and all monies, including any interest associated with the sale or transfer of Credits in accordance with this Agreement. Funds in this account can only be used to provide compensatory mitigation (including selection, acquisition, design, implementation, administration and management of Mitigation Projects).

15. IN-LIEU FEE MITIGATION PROGRAM (“PROGRAM” OR “FUND”) – The Virginia Aquatic Resources Trust Fund as proposed in this Agreement is referred to herein as the “Program.”
16. INTERAGENCY REVIEW TEAM (or “IRT”) – An interagency group of federal, state, tribal, and/or local regulatory and resource agency representatives that participates in the development of a Site Development Plan and oversees the establishment, use and operation of a Mitigation Site with the Corps and DEQ serving as Chair(s).
17. LEDGER – An accounting of mitigation credits and debits.
18. MITIGATION – The process of sequentially avoiding impacts, minimizing impacts and compensating for impacts to aquatic resources that could not be avoided or minimized. “Mitigation” is often used as shorthand for compensatory mitigation.
19. MITIGATION LIABILITY – The full liability assigned to the Program or basin which incorporates assessment methodologies (stream – USM) and standard ratios (wetland – wetland type ratios). This liability does not usually equal the amount of impacts into the Program or basin, but is modified based on the assessment methods utilized and required by the regulatory agencies.
20. MITIGATION PLAN – A detailed portion of the Site Development Plan that identifies specifically how aquatic resources and associated upland buffers will be restored, created, enhanced, preserved, managed and maintained on the Mitigation Site.
21. MITIGATION PERFORMANCE – The outcome of applying success criteria to a Mitigation Site in terms of identified goals and objectives.
22. MITIGATION PROJECT – The entire compensatory mitigation project, including all activities described in the Mitigation Plan and undertaken on the Mitigation Site to generate Credits.
23. MITIGATION SITE (“SITE”) – A site or sites where aquatic resources are restored, created, enhanced or preserved expressly for the purpose of providing compensatory Mitigation for authorized impacts to similar resources.
24. No Net Loss Liability (NNL) – The restoration or enhancement liability associated with wetland and stream impacts. For wetlands, the no-net loss liability is equal to the acreage of wetland impacts. For streams, the no-net loss liability is equal to ½ the total compensation requirement.
25. POTENTIAL CREDITS – As used in the Basin Liabilities and Credit Balance Summary Tables, Potential Credits equal the total expected credits from all approved mitigation projects based on the Site Development Plan or similar specifics approved by the IRT, less any Released Credits from those approved mitigation projects. The difference between Potential and Proposed Credits is that Potential Credits include Constructed/Completed Credits, whereas Proposed Credits do not.
26. PROPOSED CREDITS– As used on Tables 2 and 6, Proposed Credits equal the total expected credits from all approved mitigation projects based on the Site Development Plan or similar specifics approved by the IRT, less any Constructed/Completed Credits and/or Released credits from those approved mitigation projects.
27. PROGRAM INSTRUMENT (“AGREEMENT”) – The legal document between the Conservancy, the Corps, and DEQ governing the establishment, operation and use of the Virginia Aquatic Resources Trust Fund; the In-Lieu Fee program instrument described under Corps regulations at 33 CFR §332.8(a)(1).
28. RELEASED CREDITS – Credits associated with Mitigation Sites that have met their success criteria, as determined by the IRT.
29. RELEASED CREDITS ADDRESSING NNL – Those credits that are derived from restoration or creation activities (wetlands) or through restoration or enhancement activities (streams) that can be used to offset the wetland acreage and stream function that is lost through impacts to these resources.
30. RELEASED CREDITS NOT ADDRESSING NNL – Those credits derived from enhancement or preservation activities (wetlands) or through preservation activities (streams) that can be

used to offset mitigation liability, but do not address the lost wetland acreage or stream function.

31. SERVICE AREAS – The geographic area for which the Program or mitigation site can be used to compensate for impacts. Programmatically, these are given at the larger scale of major river watersheds. Individual mitigation sites may have more restricted areas that generally service the same or adjacent fourth order subbasin within the same major river watershed. All Service Areas are approved by the IRT.
32. SITE DEVELOPMENT PLAN (“SDP”) – The overall plan governing establishment, restoration, creation, enhancement and/or preservation of aquatic resources and associated upland buffers on the Mitigation Site.
33. STAFF SALARIES AND EXPENSES – This portion of the Program’s funds are established on a three-year cycle to support the Conservancy positions that manage and implement Fund projects. These budget items are allocated to the General Account, but are debited from the resources for the staff time spent on specific project types (basins and resource).
34. STATEWIDE DEVELOPMENT FUND – This portion of the Program’s funds were established to fund initial activities and development of projects, prior to the formal proposal and approval of individual sites. This budget item was approved and previously discussed in the 2011 VARTF Annual Report.
35. SUCCESS CRITERIA – The minimum standards required to meet the objectives for which the Site was established.
