

Plant Checklist

Tiger Creek Preserve

Atop Florida's largest ancient islands, we protect plants and animals found nowhere else on earth.

This is a living document with species yet to be verified in the Preserve. Help us improve it by providing verifiable reports (lat/lon and photos preferred) of species not on this list to iNaturalist, to Preserve staff, or email VisitTCP@tnc.org.

Tiger Creek Preserve protects a critical connection for the rare habitats, plants, and animals on the Lake Wales Ridge, a national hotspot of biological diversity. Its 4,980 acres harbor 10.4 miles of hiking trails. Named after the pristine blackwater stream that forms its spine, the preserve contains hardwood swamps, hammocks, scrubby flatwoods, pine flatwoods, sandhill and longleaf pine/wiregrass habitat.
