- Coastal
- Western Oregon
- Eastern Oregon
- Cascades
- Statewide

The nature we depend on depends on us

48% of Oregon is covered by forests that sustain wildlife and people.

Forests produce clean water.

Water is filtered through their roots, providing clean drinking water.

Forests filter the air.

They are Earth's lungs, absorbing toxins and producing clean oxygen that we breathe.

Forests fight climate change.

By holding in vast amounts of carbon dioxide, trees stabilize the global climate.

The Nature Conservancy is working hard to improve the health of Oregon's forests. Let's stand together. Learn more and get involved at [NatureOregon.org](https://www.natureoregon.org)
